

1 ORGANIZING COMPUTER NETWORK IDENTIFICATIONS AND CONCURRENT
2 APPLICATION OF POLICY SELECTORS

3 Abstract of the Disclosure

4 Methods, apparatus, and computer-readable media for
5 associating computer network identifications with network
6 policies. A plurality of network detectors (3) are coupled to a
7 client computer (1). A network probe (4), coupled to the network
8 detectors (3), associates each network identification revealed by
9 a network detector (3) with a netspec. A netspec database (6),
10 coupled to the network probe (4), associates netspecs with
11 locations. A policy guide (8), coupled to the network probe (4),
12 associates network identifications with locations. A network
13 interface module (9), coupled to the policy guide (8), implements
14 network policies based upon locations.
